### **DETAILED ACTION**

Claims 1-14 are pending in the instant application.

#### ***Priority***

This application is a National Stage entry of PCT/JP2005/005695 filed on 28 March 2008 and claims priority to Japan foreign application 2004-107760 filed on 31 March 2004. A certified copy of the foreign priority document in Japanese has been received. No English translation has been received.

#### ***Election/Restrictions***

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

- 1) The compound of formula (1); and
- 2) The compound of formula (4).

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a). Applicants are requested to note that there is no claim generic to the two species. Both species are written in independent form.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features. The claims are directed to a process for producing the compounds of formula (1) and formula (4). The compounds of formula (1) and of formula (4) are both publicly known, for example, in JP 2004-035474 (IDS dated 14 March 2008). Furthermore, the flavone skeleton is commonly known in the art. Thus, the claims do not have a special technical feature in common, and are therefore not considered as being so linked as to form a single general inventive concept.

Due to the complexity of the above set forth election/restriction requirements, a telephone call was not made to the applicant's agent to request an oral election. See MPEP § 812.01.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the

requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
